Test summary report (template)

Complete this after the run that is being signed off. Attach the evidence pack, or reference where it is stored.

Field	Value
System and version	<>
Test plan	[document ID and version]
Report ID	[ID from the QMS]
Run date	[YYYY-MM-DD]
Commit	[from `manifest.json`]
CI run	[URL from `manifest.json`]
Executed by	[name or CI actor]
Environment	[name, application image digests]
Browsers	[from `manifest.json`]

1. Summary

<Two or three sentences: what was tested, the overall result, and whether the acceptance criteria in the plan were met.>

2. Results by requirement

[Paste the table from `reports/regulated/traceability/traceability-matrix.md`, or attach the CSV.]

Verdict	Count
Verified	
Verified (known defect)	
Failed	
Not tested	
Skipped	

3. Deviations and defects

ID	Requirement	Description	Classification (system / test / environment)	Risk assessment	Decision	Owner

Known defects recorded as `@known-issue` tests:

Test	Defect	Requirement	Plan

4. Requirements not tested

[List each requirement with the verdict "Not tested", with the reason and who accepted it.]

5. Differences from the plan

[Anything done differently from the validation plan, and why.]

6. Integrity of the evidence

- Evidence pack location: <>
- Checksum check (`sha256sum -c SHA256SUMS`) performed by [name] on [date]: [passed / failed]
- SHA-256 of `manifest.json` : <>

7. Conclusion

[Whether the system met the acceptance criteria, any conditions, and the residual risks accepted.]

8. Approval

Name	Role	Signature	Date
